Introduction

Welcome to the Email Campaign Manager 2.1

ECM 2.1 release contains multi-lingual support and some usability improvements as well as fixes to issues found in the previous version.

New features

This section contains the new feature added in this release.

Ability to send messages with a multi-lingual support

ECM 2.1 lets you create message versions in multiple languages contents and dispatch the message with multi-language support were the recipients receive the message with language content as per the recipient's preferred language.

ECM 2.1 can be configured to point to the user profile field that represents the preferred language of the recipients.

Ability to create different language content with ease

The language content switch becomes more easily accessible and now helps the user to navigate between different languages content much easier.

With this release it is much easier to duplicate multilingual messages using Duplicate or Save as subscription template actions.

Ability to filter reports by the content languages sent

With ECM 2.1 after a message is being sent to a list of recipients with different preferred languages, users can view and analyze reports for the message based on a selected language that was used while sending the message, or just view the overall performance on all of the languages used.

This will give the user a better understanding of the message performance in regards to the selected message.

A new report is introduced, "Message Performance per Language" to show the message performance metrics per language.

Easier access to the Executive Insight Dashboard

ECM 2.1 enable users to opens up the Executive Insight Dashboard by just clicking on the Dashboard reports like Email Channel Performance Report and Message Performance Report, this enables the users to further view and analyses the message performance.

Issues resolved

This section contains the list of the issues resolved in this release.

- When scrolling recipients for Triggered messages, performance issues could appear (380792).
- After message scheduled for Activation or Deactivate message button can be disabled (380718).
